### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the claims:

In claim 4 line 2 "position" has been changed to --positioned--.

In claim 22 line 2 "position" has been changed to --positioned--.

### ***Allowable Subject Matter***

2. The following is an examiner's statement of reasons for allowance: As to claim 1, the prior art of reference does not disclose an internal fluid flow passage way comprising a first orifice-defining portion, and a flap having a second orifice defining portion, where the first orifice-defining portion and second orifice-defining portion are disposed apart when the flap is in its first position and the first and second orifice defining positions are proximate to one another, defining an orifice through which fluid flowing through the nozzle arrangement must pass, when the flap is in another position.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent #6,959,879 to Laidler et al. discloses a nozzle arrangement with similar structure but lacks a flap. U.S. Patent #7,328,819 to Lewis discloses an apparatus which uses a flap valve but does not have orifice defining portions. U.S. Patent #6,131,568 to Denyer et al. discloses a device that makes use of a flap valve. U.S. Patent #5,309,961 to Franke et al. discloses a nozzle with flaps that alters the flow of a fluid. U.S. Patent #5,615,835 to Nelson discloses a nozzle which has a flap to prevent backflow.
